Management of commonages in Ireland

• Headage and premia lead to increases in sheep numbers/overgrazing in the 70s-90s
• Commonage plans commenced in the late 90s
• Destocking prescribed as necessary
• ECJ C117/00 judgement against Ireland. Case closed in January 2009.
• Decoupled payments/extensification
• Ageing farming population
• Reduced supports (DAS, SPS, REPS/AEOS)
Commonages in Ireland

- 6,793 LPIS plots, in varying condition
- circa 15,000 herd numbers
- 435,978ha gross area (2011)
- 410,187ha reference area (94%)
- Dormancy an issue (only 63.3% claimed*)
- To date, no proper management of grazing, either of overgrazing or of undergrazing – nobody knows what stock are on the hills
- Significant risk for SPS payments (€190 million per annum to commonage farmers)
Dormancy – have we enough farmers?

• Very worrying trends, particularly in commonages
• Some farmers have abandoned the commonages, others are not currently allowed to increase
• Some farmers are claiming the commonage on SPS but are not grazing the commonage
• We need to agree a better model that
  – Allows farmers increase numbers where the commonage requires an increase (ie to unfreeze the commonage)
  – Ensures that the land is in GAEC (with other benefits)
  – Protects payments
  – Delivers biodiversity
• Future supports depend on this (both Pillar 1 & 2)
• Many farmers welcome this approach
Dormancy: Co. Kerry
What has been proposed for commonages?

• Data for 4,600 LPIS parcels has been published, accounting for 372,000ha (91% of the resource)
• Some outstanding areas to be assessed
• Collective min/max figures given by DAFM, which could be translated into individual figures BUT this won’t work if there are dormant shares
• This is a real opportunity for self regulation and to protect payments
• Lead in time / professional support
A partnership approach:

• Many interested parties, with common objectives (whether they realise it or not!)

• There are issues in the uplands that need to be addressed (grazing management, burning, invasive spp, dumping, scrub encroachment) – this approach could provide a forum for a possible solution

• Future AE schemes will favour a collective approach. Pillar 1 supports will demand appropriate management of the uplands (incl commonages)

• Uplands working group have shown the way
Possible Next Steps for Uplands

- A *partnership approach*; between DAFM, DAHG, the farming organisations, the farmers, the Heritage Council, BWI, Teagasc, Mountaineering Ireland, the Golden Eagle Trust, NARGC, WUC/IUF etc etc

- Communicate the outcomes and the roadmap for the next six years

- Look to use incentives in the next RDP

- Develop a commonage review process

- Finalise the remaining commonages (9%)

- Ensure co-ordination, facilitation and lead in time; the structure and hooks are there

- Maintaining the *status quo* is not an option
Core Management Requirements

GLAS (Biodiversity & Other)
Maximum €5,000 per farmer

Targeted Outputs
(“Locally Led Agri-Environment Schemes “)

GLAS+ Fund
(Maximum €2,000 per farmer)

Unclear if additional payment for Commonage – priority entry if 80% agreement.

Commonage Facilitator
